At \$0.11 per kWh, this 4W LED candle estimates energy cost \$0.48 per year, using \$11 of electricity over its 25000 hour lifetime. This is a \$57.75 savings when compared to the \$68.75 required to run a 25W incandescent over the same period. Actual savings will vary depending on cost per kWh. 22.8 years means rated average life based on engineering testing and probability analysis where the lamp is used 3 hours per day, 7 days a week.
