Mechanical Drawing

At \$0.11 per kWh, this 6W LED bulb estimates energy cost \$0.72 per year, using \$16.5 of electricity over its 25000 hour lifetime. This is a \$93.5 savings when compared to the \$110 required to run a 40W incandescent over the same period. Actual savings will vary depending on cost per kWh. 22.8 years means rated average life based on engineering testing and probability analysis where the lamp is used 3 hours per day, 7 days a week.
