Mechanical Drawing

At \$0.11 per kWh, this 9W LED bulb estimates energy cost \$1.08 per year, using \$24.75 of electricity over its 25000 hour lifetime. This is a \$140.25 savings when compared to the \$165 required to run a 60W incandescent over the same period. Actual savings will vary depending on cost per kWh. 22.8 years means rated average life based on engineering testing and probability analysis where the lamp is used 3 hours per day, 7 days a week.
