At \$0.11 per kWh, this 10W LED downlight estimates energy cost \$1.20 per year, using \$38.5 of electricity over its 35000 hour lifetime. This is a \$154 savings when compared to the \$192.5 required to run a 50W incandescent over the same period. Actual savings will vary depending on cost per kWh. 32 years means rated average life based on engineering testing and probability analysis where the lamp is used 3 hours per day, 7 days a week.
